

## Legend

-----Sender of the context below-----	
<b>Context method class &gt;&gt; Context method name</b> Context method body	<b>context number</b> <i>receiver of the context method</i>

▲  
|  
|  
|  
|  
|  
When a method looks for a context,  
the arrow shows which context  
the method has found

▲  
|  
✕  
|  
|  
While looking for a context,  
the method deletes the contexts  
that doesn't fit
